## Online Training and Compliance Management Solutions

TargetSafety leads the industry in the development of online training and compliance management solutions. These solutions—designed specifically for firefighters and emergency medical technicians—are part of a powerful, web-based risk management platform known as PreventionLink.

Since 1999, more than 2,500 fire and EMS departments have relied on TargetSafety and PreventionLink to:

- **Dramatically reduce the expenses** associated with overtime, administrative tasks and fuel
- **Document and maintain records** on all required firefighter training and EMS continuing education hours
- **Facilitate better internal communication**, including during an emergency
- **Assign and deliver online NFPA and EMS continuing education courses** as well as OSHA and other compliance-related training

*“Using PreventionLink, we can provide vital safety training to our firefighters and EMTs. We can also track course completion and more easily manage other required tasks. Since first implementing the solution, we’ve automated many previously manual processes like record-keeping—letting us focus on what is truly important, protecting our community.”*

Tom Gallinatti, Battalion Chief  
Oakland Fire Department  
Oakland, CA

# PreventionLink: The Benefits Add Up

## Cost-Effectively Train Firefighters and EMTs

PreventionLink is the most convenient and cost-effective way to deliver training. Featuring more than 170 refresher hours, the platform's course catalog is available anytime and anywhere there is a computer and Internet connection. And, because the training is delivered online, your employees can go at their own pace—dramatically increasing their understanding and retention.

## Simplify Recordkeeping and Ensure Compliance

Using PreventionLink, you can create, assign and track the completion of all training, document vehicle and equipment inspections, and record employee acknowledgment of your department's policies. You can also monitor firefighter and EMT licenses and certifications, oversee ICS qualifications and produce ISO reports. In addition, PreventionLink's API makes it possible for you more easily manage user records, as it can be synchronized with systems such as PeopleSoft, ZOLL (Sunpro, BIO-key), Firehouse and TeleStaff.

## Create Custom Training and Tests

PreventionLink lets you deliver your department's own training content. It also makes it possible for you to build custom tests for each course. With PreventionLink, you can develop, distribute and grade these tests as well as establish how frequently users may take them.

## Increase Communication within Your Department

You can easily disseminate information throughout your organization by uploading files and important website links to PreventionLink's File Center. PreventionLink also features an online Forum, giving your employees the opportunity to provide feedback. And, in the event of an emergency, you can quickly notify a pre-selected group of firefighters and EMTs, 2,500 per minute, via telephone, cell phone or email.

## Screen Employees and Monitor Their Driving Records

TargetSafety provides you with access to a complete employment screening solution, increasing your odds of a successful hire. We also help automate your department's California Employer Pull Notice (EPN) program—which allows you to electronically oversee employee driving records.

## Firefighter and EMS Training

As an NFPA partner, and the sole provider of online NFPA safety training, TargetSafety offers firefighters an extensive course catalog, featuring:

- NFPA 1001 Series Firefighter I and II
- NFPA 1021 Series Company Officer
- NFPA 1500 Series
- Emergency Vehicle Operator
- First Responder Operations Level Refresher
- Emergency Response to Terrorism
- OSHA and Other Compliance-Related Training

We also provide EMS continuing education courses, covering such topics as:

- Preparatory
- Trauma
- Patient Assessment
- Medical
