CSAC EIA Partners with TargetSafety to Provide Its Members with a Comprehensive Online Risk Management Platform

SAN DIEGO, CA – July 1, 2008 – CSAC Excess Insurance Authority (EIA), the nation's second largest public entity risk pool, and TargetSafety, the U.S. leader in online, enterprise risk management solutions for public entities, today announced that they have signed a multi-year partnership agreement. Under the terms of the agreement, EIA members now have access to TargetSafety's PreventionLink™, providing them with a comprehensive, web-based platform for measuring risk and minimizing claims.

"We selected TargetSafety based on its proven ability to deliver a value-added, risk management solution to our members, which equates to 1,600 public entities in California," said Charles Williams, EIA's Loss Prevention Manager. "Using PreventionLink, EIA members can significantly reduce claims and their associated expenses. They can also automate and streamline their existing reporting and compliance processes, enhancing productivity and ensuring that they are adhering to established policies and procedures."

"We are extremely pleased that EIA selected TargetSafety and our PreventionLink platform," said Bruce Kaechele, President and CEO of TargetSafety. "EIA continues to be one of the most progressive public entity risk pools in the country. We are delighted to be working with an industry leader that is committed to bringing increased value to its members."

Developed exclusively for public entities, PreventionLink features a robust suite of training, compliance, communication and risk management technologies. Its extensive library of over 445 online courses gives organizations the ability to schedule, administer and document employee training. The PreventionLink Compliance Management module provides tools to create and oversee key tasks, distribute policies and track the status of user certifications. Through the Communication Management module, public entities can exchange information and data across their organization. They can also define, measure and monitor important metrics that will keep employees safe and protect assets with the platform's Risk Management module. All of this data is tracked in real time, giving administrators the ability to run reports, benchmark operating units and implement corrective actions as required.

About TargetSafety

Founded in 1999, TargetSafety is a pioneer and leader in the development of online solutions that simplify and standardize risk management. These solutions are used by more than 2,500 public entities nationwide, including risk pools, cities and municipalities, fire and emergency medical service departments, and water and wastewater districts. The Company's flagship product, PreventionLink, is the industry's most comprehensive suite of training, compliance, communication and risk management technologies for identifying, prioritizing and minimizing risk. TargetSafety is headquartered in San Diego, California and has a regional office in Boston, Massachusetts. For more information, please visit the website: www.targetsafety.com.

About the EIA

CSAC Excess Insurance Authority (EIA) is a risk sharing pool of California counties and other public agencies, dedicated to controlling losses and providing effective risk management solutions. In 1979, 29 California counties came together to form a Joint Powers Authority (JPA) called the CSAC Excess Insurance Authority to pool their risk and provide a viable and cost-effective solution for the counties' insurance and risk management needs. Since then, the EIA's membership has expanded to include 93% of the counties in California, approximately 80% of the cities, as well as numerous school districts, special districts, housing authorities, fire districts and other Joint Powers Authorities. Additional information is available on the organization's website: www.csac-eia.org.

PreventionLink is a trademark of TargetSafety.
