

## PreventionLink™

**The PreventionLink platform provides Administrators the ability to reset user passwords.**

When a user cannot recover a password using the available recover tools an administrator or supervisor can reset it for the user. A new password will be specified and a notice of change is emailed to the user.

**User accounts are more secure.**

Since there is no way to read the password as an administrator, user accounts are secured from unwanted access. When a password is reset a notification is sent to the user letting them know that the password was reset. The notification does not send the password itself. This notification limits unwanted changes from happening due to the increased visibility of changes.

## Feature Overview

### Password Reset Tool

- Easy Administrator Control
- Increased Security

Included with PreventionLink

Used by all organizations of any size or industry

The Password Reset Tool is part of the PreventionLink platform Professional and is available at no extra cost.
